Unique drawer system for more space and overview

 **BEKS**

Effortless storage

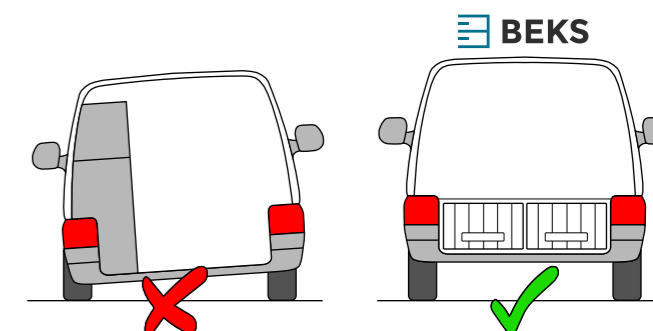

Many company cars are cluttered due to a lack of clever storage space. As a result, you have to search for the right materials and tools before you can finally start the job. Do you recognize this problem? Then our unique drawer system as in-vehicle equipment is the solution for you!

Why a drawer system?

Our drawer system is very different from the traditional brands of in-vehicle equipment. We work with drawers on the floor of the car, rather than racks against the side walls. This allows you to use the full width of the storage space. Our unique drawer system offers even more advantages:

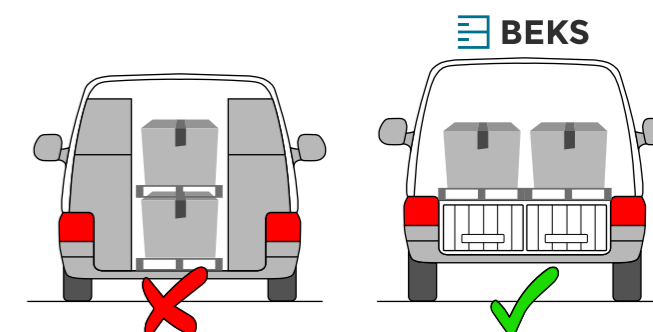

Even loading

Due to uneven loading, your car's handling will be impaired. Moreover, the suspension and tyres are overloaded. The BEKS floor drawer system helps you achieve good and even loading of your bus.

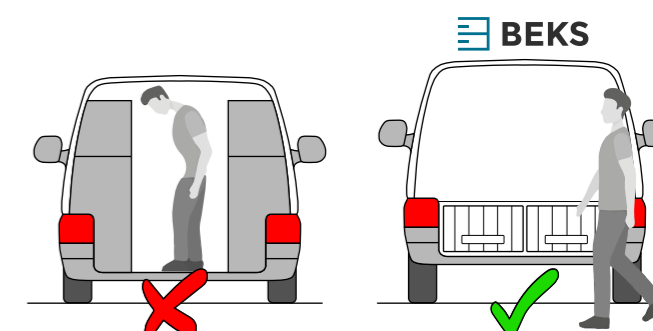

I cannot reach my things

In almost all situations, a drawer system is a better solution than wall shelving. Everything has a fixed place and you put extra materials on top of your drawer system, where you can still access access to your tools and parts.

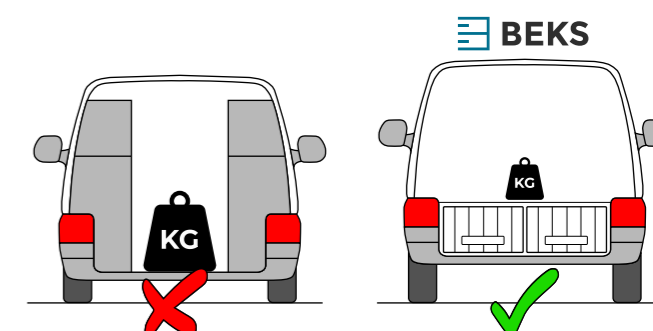

Standing straight

If the height of the car is not sufficient to stand upright, access to the loading space is annoying and sometimes even painful. With our drawer system, your materials and tools are easily accessible from outside. That is ergonomics at its best!

Fuel saving

Our drawer system is the lightest type of commercial vehicle equipment. Every kilo you carry too much with you, costs you 0.1 litres of fuel per every 100 kilometres you drive.

Why BEKS?

What makes BEKS so unique

Unique drawer system

Development of the first generation of BEKS drawer systems began in 2001. Due to the many positive reactions, BEKS continued to grow and develop the product further. To this day, the BEKS drawer system is the benchmark for the Mini, Compact and Midi segments. Moreover, this unique drawer system finds its way into many pick-ups and vehicles from the Maxi segment.

Our strength

As a small organisation, we are flexible and can respond immediately to your specific needs and requirements. We also use state-of-the-art techniques and high-quality materials. As a result, our system is very light and very durable. Chances of defects are virtually nil.

This is how we work

We have dealers throughout Europe who will be happy to be at your service. They have extensive experience in installation of our drawer system and can fit out any commercial vehicles according to your wishes.
